

# Immune Boost

## Immune Injection and IV

### *Immune Boost*

#### **A triple-defense formula available through immune injection and IV treatment**

Our immune injection and IV treatment Immune Boost features two powerful antioxidants and zinc sulfate, an essential mineral for potency, to support immune response

### **Potent Antioxidants**

**Ingredients:** Glutathione, ascorbic acid, zinc sulfate

**Benefits:** Glutathione is important to immune defense because it provides host cell protection and promotes the functionality of lymphocytes, white blood cells that recognize and fight viruses and other health threats.

Ascorbic acid supports cellular function in both branches of the immune system. One branch handles innate immunity, and the other handles adaptive functions.

The innate branch of the immune system provides quick, overall defense. Innate protection is provided in physical, chemical, and cellular form, and can help defend against inflammation. In addition, innate immunity can support long-term defense and the resolution of long-term infection.

The adaptive branch is for targeted pathogen defense. Adaptive protection has a slower response than innate protection, with the initial effect potentially taking days to activate. Adaptive immunity recalls threats, responding more quickly and with more strength when previously detected conditions are recognized.

The immune system activates zinc ions released from zinc sulfate to support innate and adaptive immunity. Zinc sulfate supplementation may aid the immune system in fighting infections and supporting wound healing.

### **Dosage:**

- Glutathione: 200mg/ml
- Ascorbic Acid: 200mg/ml
- Zinc Sulfate: 2.5mg/ml
