

FEMILIFT

VAGINAL REJUVENATION

What is FemiLift?

Femilift is a laser-assisted procedure designed to improve vaginal irregularities through resurfacing. It tightens the vagina and treats stress urinary incontinence.

- Involuntary leakage of urine
- Other hormonal issues
- Vaginal dryness
- Vaginal issues caused by childbirth
- Symptoms of menopause
- Vaginal laxity

No Downtime

Minimal Pain

Immediate Results

Non-Invasive

The FemiLift CO2 laser, made specifically for the vagina, **corrects the loss of collagen and laxity by remodeling the collagen and causing contraction of the tissues** as well as later more production of collagen. This all results in **healthier vaginal tissue** as well as **tightening of the vagina**. The same therapy around the collagen tissue surrounding the bladder and urethra can **help decreases urinary leakage**.
