

PROLOZONE THERAPY

Prolozone® is a homeopathic/oxygen injection technique for treating all forms of musculoskeletal and joint pain including chronic back pain, rotator cuff injuries, degenerative and arthritic hips and knees, degenerated discs, and shoulder and elbow pain. The good thing about Prolozone is that because it corrects the pathology of the disorder, there is a 75% chance for the chronic pain sufferer to becoming permanently pain-free.

What is Prolozone?

Prolozone is derived from the Latin word "proli" which means to regenerate or rebuild and the word ozone. Ozone is the most highly active form of oxygen in the universe. Prolozone uses the power of oxygen to cause damaged tissues, joints, ligaments, and tendons to regenerate. This may cause complete healing and a permanent end to pain.

How Does Prolozone Work?

The reason that some injuries completely heal and others don't, has to do with circulation. In order for a damaged area of the body to regenerate and heal, it must have the critical elements that only the blood can provide: vitamins, minerals, and oxygen.

Of these, by far the most important is **oxygen**. Low levels of oxygen cause an accumulation of lactic acid, which is what causes pain. Prolozone works in three ways. First, homeopathic anti-inflammatory medications like dextrose and procaine are injected into the area to reduce inflammation and swelling. Next, the area is treated with **vitamins** and **minerals** that are critical for healing. And finally, the area is infiltrated with oxygen in the form of ozone. The result is that the tissues get what they need to heal. And as they heal, the circulation to the area is re-established, and the treatment is complete. The response to treatment varies from person to person, but most people only need from 3-5 treatments.

After each injection you should expect an improvement which may include less pain, more ability to move and more flexibility. After treatment you may immediately drive or go back to work depending on the severity of your condition. It is always a good thing to listen to your body and give it the rest it needs to heal.

Conditions That Can Be Treated with Prolozone

Prolozone works on just about any pain problem you might have, including:

Low back pain, plantar fasciitis, carpal tunnel syndrome, torn tendons, TMJ syndrome, sciatica, heel spurs, neuromas, tennis elbow, rotator cuff tears, knee injuries, lipomas, scar tissue, and even wrinkles.

Because Prolozone treatments may also result in cartilage regeneration, the technique is also remarkably effective even for severe cases of osteoarthritis of the hip or knee.

The good thing about Prolozone is that it is not just a treatment for pain. The results may often represent a permanent fix to the problem!
